MT3200 - Universal In-Line Filter Assembly

What is different about this new service filter?

Issue #1

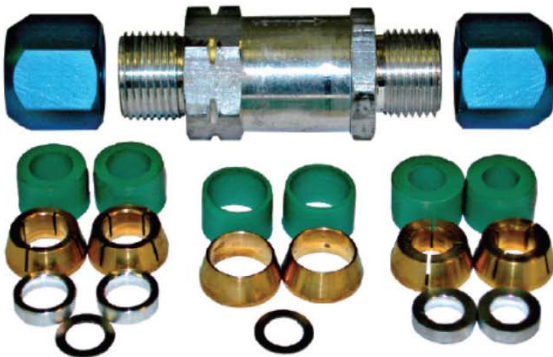

Provide a simplified robust leak free installation. The original filter design incorporated an "O" ring to seal around the a/c tube OD. Successful installation required a smooth round surface.

Technicians pointed out the obvious field reality:

- 1) All tubes are not perfectly round.
- 2) Tube finish does have surface imperfections.
- 3) Installing the filter collar twice to assure proper seating is non-productive and technician sensitive.

The redesigned filter replaces the single "O" ring with a robust tapered sealing sleeve.

The sleeve provides 10 times the sealing area and greatly increases the seal's ability to overcome field tube irregularities. The additions of slots on the brass collar permits the collar to seat correctly on the first installation as well as increase compression on the sleeve.

Issue #2

Increased debris containment.

The redesign incorporates a new screen within a new body. This not only shortens the overall filter length but also increases three-fold capacity while reducing pressure and flow restrictions.

Issue #3

Several models and inability to cover new systems. The old filter had four P/N's. Two tube sizes with a variation of each to incorporate a .072" orifice. The new unit is universal and fits the same tube sizes plus the 5/16", common to TXV systems. In addition, the universal unit permits the technician to rework an existing orifice (regardless of size -.072", .062", .052", etc. and incorporate it into the filter. This greatly simplifies inventory and increases technician flexibility. Overall, the new filter should provide the insurance the technician has been requesting to reduce comebacks on compressor replacements, especially with rear a/c systems.

Fits 3/8, 5/16, 1/2 Dia Tubes
Can be used with or without orifice tubes.

Visual Parts System - MT9006

Hard Parts

Cabinet MT9006 contains 5 different, task-oriented boxes containing many of the small parts that are easily lost or hard-to-find. The first two boxes contain assortments of the various orifice tubes now in use and the metal gaskets required for servicing Chrysler vehicles.

The remaining three boxes cover the variety of refrigerant caps and valve cores found on today's systems, along with kits to service Spring Lock Couplings and Sealing Washers for Chrysler and GM.

R134a Retrofit Kits

Ultra PAG OIL

Using exclusively the Double "End-Capped" PAG approved by vehicle manufacturers worldwide. Santech® has developed a unique line of R134a retrofit kits designed for use with specific compressors by vehicle Year, Make and Model. This eliminates duplication of many of the same components in different kits for different models from the same manufacturer.

Available kits are listed below and are packaged in an attractive point-of-purchase carded system to allow retail-type displays.

Retrofit Kits All retrofit kits include the necessary retrofit labels, fittings, gaskets, o-rings, caps and valve cores for each type of compressor listed below.

Universal Kits All universal kits include only the retrofit labels, fittings and caps that are necessary.

After years of searching, Santech has engineered a flushing agent that provides excellent solvency at a cost-effective price.

Designed for use in automotive A/C Systems, our solvent will remove acid, contaminants, and moisture that can affect system performance and life.

To achieve optimum results, Santech Flush Cylinder w/Gun MT4035 is recommended.

RED ANGEL™ A/C Stop Leak

Permanently Seals:

- ▶ Condensers
- ▶ Evaporators
- ▶ Connection Hoses
- ▶ Gaskets & O-Rings

MT3118

2 oz. Bottle

QTY: 1

Non Clogging Conditioner.

Works On R134a & R12 Automotive Systems.

Will Red Angel clog or damage a recovery unit?

No, Red Angel gets reclaimed with the oil and will not clog or damage any part of the recovery unit. Guaranteed.

How does it work?

Red Angel is inert until it mixes with R-12 or R-134a. Once activated, it seeks out oxygen (which is present at the site of a leak) and bonds with it — forming a chemical weld and sealing the leak.

How large of a leak does it repair?

Red Angel will seal leaks in A/C systems that can hold 5 inches of vacuum for 25 minutes or 15 inches of vacuum for 5 minutes.

Does it seal evaporator leaks?

Yes. It also seals leaks in connection hoses, gaskets, o-rings & condensers.

How much do I use?

Use one bottle (2 oz.) for all automotive A/C systems (up to 5 lb. system). When adding Red Angel to an evacuated system, substitute 2 oz. Red Angel for 2 oz. of oil. When a vehicle has a slow leak & maintains a partial charge, add 2 oz. of Red Angel along with the necessary amount of R-12 or R-134a (see service manual).

How long will it stay in the system?

Red Angel forms a permanent seal when it comes in contact with oxygen.

What happens if I recycle the refrigerant?

Red Angel is removed from the A/C system with the refrigerant. It is then separated from the refrigerant with the reclaimed oil.

Can I install it without an oil injector?

No, you must use an oil injector.

MT4055
R134a Oil-Dye Injector

MT4056
R12 Oil-Dye Injector

High quality oil injectors are also available from Santech™ Industries. Recommended for adding Red Angel A/C Stop Leak or refrigerant oil to the A/C system. Add Red Angel A/C Stop Leak by allowing vacuum to pull it in after the evacuation or push it in using the recharge process. The primary connection uses a ball valve design attached directly to the end of the A/C hose. NOTE: All claims, statements and warranties are made by Red Angel™ - Universal Products.
